PANSIES

Favorites with all. For best results you must start with a good strain. The finest Pansies are, as a rule, shy seeders, which accounts for the difference in the price of the various mixtures offered.

Spring Planting. Seed should be sown in hotbeds or boxes, then transplanted to open ground after freezing is over. It is a mistake to plant Pansies in the shade of a tree or building. During dry weather the bed should be watered daily, and in extreme cases twice a day for the best results. Cultural leaflet upon request.

Fall Planting. Many gardeners prefer August sowing in hotbeds, covering well with straw, mulching with manure when winter sets in, gradually uncovering on warm days in early spring. These will produce the early April blossoms. Pansies are successfully grown from seed even by the novice; however, we recommend our blooming plants. Ready in April. **Pansy Plants, see page 20.**

SUPERB GLADIOLUS

MORE POPULAR THAN EVER—ALL POSTPAID

Especially Low Prices Continued for All Gladiolus Bulbs. Plant Liberally. Be a "Glad Fan."

This very attractive flower has grown into popularity with marvelous rapidity. All lovers of flowers find a suitable space for many of the wonderful distinct varieties. You can not afford to be without a liberal planting.

The Gladiolus are the most attractive and useful cut flowers of all the summer flowering bulbs. The long, graceful spikes that carry fifteen to twenty buds may be cut soon as the first flower buds show color; then, if kept in water each successive bud will develop and thus prolong the blooming many days. No other flower is thus equal, nor as easy of cultivation.

The planting season starts in April, and continues until in June, at intervals of 2 weeks; you thus have flowers from late July until frost time. Best results are obtained in a sunny position and placing the bulbs fully 6 inches deep. Water freely.

A very complete **Cultural Leaflet on Gladiolus** free with orders upon request. To eliminate Aphis and Thrip treat with Semesan, or Corrosive Sublimate, and store with Naphthalene Flakes.

6 bulbs of a kind at dozen rate; 25 of a kind at 100 rate.

The past few years there has been considerable damage done by Gladiolus Thrips. They injure the foliage and unfolded buds so that they do not open into normal flowers. Be on the safe side, whether planting new stock or bulbs saved from previous year. **Treat before planting with:**

Hall's Japan Honeysuckle

Plant vines in assortment; they all blend wonderfully and as they flower at different times the effect is continuous.

There are many places around every home where vines can be used with satisfaction—on arbors, trellises, fences, stumps, etc. Do not overlook their importance.

Ampelopsis Engelmanni—Clinging Ivy. Is very quick-growing. Its glossy, light green foliage clings to brick, stone or wood, changing to a beautiful crimson in fall. Usually free from insects. Clematis Jackmani Large Flowering. No other climbing plant equals in attractiveness these beautiful large-flowering Clematis. They need rich deep soil, perfect drainage, though abundance of water. Their requirements are peculiar, and even then they will die occasionally. Be sure that the roots are properly spread out and earth comes in contact up under center of crown roots. Special instructions given with each purchase when asked for.

STRAWBERRIES

Buy one-year-old plants and get them into the ground as soon as you can. Before planting, dip the roots in water. Set the plant with the crown or bud at the surface of the ground. April and early May is the best time to set the plants. If in May, the leaves should be trimmed. We do not recommend fall planting. For best results with Strawberries, give all-day sunshine and apply nitrate of soda or fine bone-meal fertilizer in June. Strawberry plants are packed 25 in a bundle. We cannot accept orders for Strawberry plants after May 10th. They are too far advanced in growth. We cannot be responsible for Strawberry plants after they leave us in good condition.

Mastodon A very popular Everbearing variety. The giant of all Everbearings. Produces heavily in July, then renews its productiveness in August and continues until freezing-up time. The berries are very large, firm and uniformly well colored. Tests have been made where 18 berries filled a quart box. Three berries weighed 2 ounces. They have a very fragrant aroma. 25 plants for 50c; 100 plants for \$1.25; 1,000 plants for \$10.00, all postpaid.

Asparagus

Bush Lima

Brittle Wax

ARTICHOKES

One ounce will produce 500 plants.

GREEN GLOBE. Large; heads are used; requires long season. Pkt. 5c; oz. 30c; ¼ lb. \$1.00.

ASPARAGUS

One ounce to 60 feet of row.

Asparagus is a slow grower, requiring at least three years to mature from seed, and is therefore not generally recommended to the small gardener. Usually unless you go into asparagus raising on a large scale, it is better that you get the roots in preference to raising from seed.

Mary Washington Rust-Proof Is green with pinkish tint at bottom. Our seed is direct from pedigreed stock which is practically rust-proof. This will eventually supersede all other varieties. Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 90c.

ASPARAGUS ROOTS

We recommend the Mary Washington Rust-Proof.

1-year-old roots. Doz. 25c; per 100 \$1.00, postpaid. 1000 1-year roots, not postpaid, \$7.00.

2-year-old roots. Doz. 40c; per 100 \$1.25, postpaid. 1000 2-year roots, not postpaid, \$8.00.

BEANS, GARDEN - DWARF

One pound will plant 100 feet, 60 pounds an acre.

Bush Beans should be planted about the last of May. The furrows should be at least 2 feet apart. A pound of wood ashes should be hoed into every 10 feet of furrow, leaving the furrow not more than an inch deep. Plant the Beans 4 inches apart in the furrow and cover them with an inch of soil. They come up in from 8 to 10 days, and the plants mature in from 6 to 9 weeks. Thorough tilling is essential; the ground must be kept soft. Avoid handling or touching the vines in damp weather.

When Bean Beetles trouble, pick off all you see, then use Arsenate of Lead.
NITRAGIN INOCULATING BACTERIA will increase your Bean crop.
 Trial size 10c; ½ bu. or 30-lb. size 25c; 1 bu. or 60-lb. size 40c, postpaid.

SEMESAN. The Premier Disinfectant—will do much toward increasing your crop of Beans, and prevent blight. Ask for free leaflet. 2-oz. can 35c, lb. \$2.25. By mail, \$2.35.

BOUNTIFUL. Stringless. A popular market variety, being very resistant to rust. Immense pods of rich green color. Pkt. 5c; ¼ lb. 10c; ½ lb. 20c; lb. 30c; 2 lbs. 55c; 5 lbs. \$1.25.

POLE BEANS

For Field Beans, see page 41.

Prepare the ground for Pole Beans exactly the same as for Bush Beans. The poles should be set up firmly, 3 feet apart, and 5 beans planted around each pole 1 inch deep, in a circle. Do not heap the earth around the pole, keep it flat. It is believed best to plant Limas with the eye down. They then come up quicker. They mature a week or two later than bush beans.

Kentucky Wonder Old Homestead. Early, long round green pods, best producer of all pole beans; quite hardy. Pkt. 5c; ¼ lb. 10c; ½ lb. 20c; lb. 30c; 2 lbs. 55c; 5 lbs. \$1.25.

CABBAGE

Three ounces of seed to 100 yards of row. One ounce will produce 2,000 plants.

The best way to raise Cabbage in the small garden is from the plants. Cabbage requires an abundance of both moisture and tilling. It is also advisable to enrich the ground if possible. Fertilizer may be conserved by placing a small amount under each hill before plants are set. It will pay you to set out both early and late varieties. Set early Cabbage 18 inches apart in rows and 2 feet apart between rows. Late Cabbage 2 feet apart in rows and 3 feet apart between rows. Cultural leaflet on request.

Eat CARROTS for Health Two ounces for 100 feet of drill.

Furrows for Carrots should be 14 inches apart and from a half-inch to an inch deep. The seed can be sown from mid-April to mid-May; it should be sown rather close, as Carrots do not germinate very well. Thin the plants out to 4 inches apart when they are 4 inches high. Soil for Carrots should be particularly well tilled before they are planted.

Early Danish Perfection

Golden Self-Blanching

Golden Bantam

Stowell's Evergreen

EARLY EVERGREEN. Similar to Stowell's, though medium early; good quality.

Golden Giant or **LARGE BANTAM.** A little later than Golden Bantam, yet earlier than Stowell's Evergreen. Produces large ears, with deep, tender kernels. A happy combination of quality and size that pleases.

The result of hybridizing gives us seed that produces very early, deliciously sweet and remarkably uniform ears—just what every home garden wants. Make two or three plantings, 10 to 14 days apart, then you have corn through a prolonged period, fresh from your garden to the table.

GOLDEN BANTAM HYBRID. 8-rowed. Extra early. 73 days.

10- TO 12-ROWED BANTAM. A little larger and later than the 8-rowed.

New Idea Hybrid Corn Blend. This blend consists of four well fixed strains of 8-rowed Golden Bantams that thus produce a succession of roasting ears prolonged fully 2 weeks. This blend is very commendable for the home garden. **Pkt. 5c; 1/4 lb. 15c; 1/2 lb. 25c; 1 lb. 40c; 2-lb. pkg. 70c.**

CORN, POP

SOUTH AMERICAN. Also known as New Golden Giant, T.N.T. and other names. Yellow seed, producing jumbo kernels. A very delicious popcorn. In fact the most popular in our market.

JAPANESE HULLESS. Small, long kernels, much liked, since it is practically hullless.

SPANISH. Very large smooth kernels, yields well.

Prices for all varieties: **Pkt. 5c; 1/4 lb. 10c; 1/2 lb. 15c; 1 lb. 25c; 2-lb. pkg. 45c; 5 lbs. \$1.00.**

CAULIFLOWER

One ounce will sow a bed 40 square feet and produce about 2,000 plants.

All our Danish seed is growers' first quality sifted, thus higher cost. For the small garden we advise getting Cauliflower plants in preference to growing from seed. The cultivation is the same as that of Cabbage, except that Cauliflower favors even a moister soil. Proper tilling and watering affect this very much. Tie the long leaves together over the growing head to keep it white. Plants ready in April and May. Cultural leaflet on request. Treat the seed with Semesan.

Early Danish Perfection Snowball "Dependable Grade." Positively nothing better for earliness and quality; produces fine white heads. The outer leaves are short, allowing the plants to be set closer together than most varieties, 18 to 20 inches being far enough apart. **Pkt. 10c; 1/4 oz. 55c; oz. \$1.65; 1/4 lb. \$5.00.**

Late Snowball or **Dry Weather.** A popular strain for late crop. Danish grown sifted seed. **Pkt. 10c; 1/4 oz. 55c; oz. \$1.65; 1/4 lb. \$5.00.**

CAULIFLOWER PLANTS

SNOWBALL. Early, ready in April. By mail: **Doz. 25c; per 100 85c.** Not postpaid, see page 30.

HOTKAP PROTECTORS. Will save your early plants from frost. 12 for 25c; by mail 30c. 100 for \$1.50; by mail \$1.65. For larger quantity, see page 51.

CELERY

Three ounces of seed to 100 yards of row. One ounce will produce 7,000 to 10,000 good plants.

Celery, to be raised from the seed, requires almost expert care. It is better for those who are not practical gardeners to buy Celery plants. These are set out about the first of June, a foot apart, and mature along the last of September or during the first two weeks of October. Celery is by nature a marsh plant, and the soil about it must be kept wet, especially when the plants are young. When they get to be about 4 inches high, shear off the tops; it makes the plant more stocky. As the plants grow, gradually draw the earth up around them to keep the stalks white; by the end of fall all should be covered but the tops. A heavy paper wrapped around each stalk will insure tender, white plants. Celery is planted in rows that should be at least 3 feet apart. About 30,000 plants to the acre. Cultural leaflet on request.

Golden Self-Blanching "Dependable Grade." French-grown seed. The choicest sort of delicious Celery; produces large bunches with broad, heavy stalks which blanch into a rich, appetizing golden yellow, making this the most popular golden Celery on the market. **Pkt. 10c; 1/4 oz. 20c; oz. 50c; 1/4 lb. \$1.50; 1 lb. \$4.00.**

GIANT PASCAL. Standard market sort for winter use. **Pkt. 5c; oz. 20c; 1/4 lb. 65c; 1 lb. \$2.00.**

WITLOOF—Brussels. True French Endive and very best variety. **Pkt. 5c; oz. 15c; 1/4 lb. 40c; 1 lb. \$1.15.**

CHIVES - Schnittlauch

A member of the Onion family. Hardy. The seed grows readily. A packet makes a suitable home supply. **Pkt. 10c; 1/4 oz. 20c; oz. 50c.** The growing plants are in bunches that can be divided. **Per bunch 25c each, postpaid.**

COLLARDS

GEORGIA, or SOUTHERN. The standard variety for greens. **Pkt. 5c; oz. 10c; 1/4 lb. 25c; 1 lb. 75c.**

CORN SALAD

Used for greens, like Spinach, or as a salad. Very hardy, thus can be sown in fall or spring. **Pkt. 5c; oz. 15c; 1/4 lb. 45c; 1 lb. \$1.25.**

CORN, SWEET

One pound will plant 100 hills. 10 pounds an acre.

Corn should be planted to the north of the garden, so as not to shade the other crops. It should not be planted in a very small garden unless it is the only crop to be raised. It needs shallow but continual tilling. Just after the middle of May is a good time to plant. The rows should be 3 feet apart, the kernels sown three together every 6 inches in the furrow. When the Corn is well started, pull out all but one stalk to each place. Keep the little shoots or suckers cut from around the roots. The ears are ready to pick when the silk is brown and the kernels on the tip are plump.

Prices for each of the following seven varieties, except Aunt Mary's: **Pkt. 5c; 1/4 lb. 10c; 1/2 lb. 20c; 1 lb. 30c; 2-lb. pkg. 55c; 5 lbs. \$1.25.**

Early Golden Bantam "Dependable Grade." Select strain of exquisite quality; when ready to use is of a bright golden yellow color. It can be planted very early; is hardy. The small stalks grow very closely together in the row and will produce 2 to 3 ears each. We especially recommend it on account of its ability to stand the cold weather of spring.

Bantam Evergreen Result of crossing Golden Bantam with Stowell's Evergreen, retaining the golden yellow color on ears.

EARLY GOLDEN SUNSHINE. Earlier than Golden Bantam. 10 to 12 rowed. Liked by market gardeners.

AUNT MARY'S SWEET CORN. A strain of very delicious white kernel that has been cultivated by a certain family in Ohio for many years. Is 10- to 12-rowed, 2 weeks later than Golden Bantam. You will be pleased with it. **Pkt. 25c; 1/4 lb. 65c.**

Country Gentleman Shoe-peg kernels. Medium large, early canning variety. Sweetest of all. Supply very limited.

LETTUCE All Select

One ounce for 200 feet of row. One ounce of Head Varieties will plant 400 feet of row. Two pounds per acre.

Lettuce will stand slight frosts, and is therefore one of the first things to plant; if the ground is well prepared, early April is not too soon. It can be planted up to the middle of July, and many prefer the later plantings. Place seed in trench half an inch deep, cover with fine soil to top of the trench and press the soil down. The plants should be up in about a week. If head varieties are wanted, thin to 4 or 5 inches. The heads are usually well formed in 10 weeks and should then be cut or they will rapidly go to seed, especially in hot weather. The rows of lettuce should be at least a foot apart. The quality of the lettuce depends on the tilling—keep the hoe busy.

*These varieties form heads.

***New York or Wonderful** "Mountain Iceberg," Dark Iceberg, also called Los Angeles Market, "Dependable Grade." This grand lettuce we believe to be the finest in cultivation. A wonderful heat-resisting lettuce and slow to run to seed, mammoth heads, like small cabbages, bright green. Our seed is direct from certified stock grown in California by Rohnert. Pkt. 5c; oz. 15c; ¼ lb. 45c; 1 lb. \$1.30.

***No. 12 Early Mountain Iceberg** A strain of the New York or Wonderful that is earliest of all head varieties thus especially suitable for growing in high altitudes. Produces a good average of very large, round, solid heads. Resists hot weather and ready for market in 60 or 70 days. Big lettuce growers use this now extensively. Pkt. 5c; oz. 15c; ¼ lb. 50c; lb. \$1.50.

***Improved Big Boston** Large, firm heads, fine for market. Pkt. 5c; oz. 10c; ¼ lb. 35c; lb. \$1.00.

MUSKMELON OR CANTALOUPE

One ounce for 50 hills, 3 pounds per acre.

Muskmelon planting and cultivation throughout are the same as those used in raising Cucumbers. Is considered rather delicate for northern latitude, but with care can be successfully grown. Starting the plants in pots or small strawberry boxes indoors, and then setting out after frost is over, gives early production. The pleasure of raising them is worth the effort.

Hale's Best This early strain is now acknowledged by the leading Rocky Ford growers to be the most profitable. Its earliness puts it ahead and its firm flesh makes it an excellent shipper. Salmon color, slightly oblong, deeply netted. Pkt. 5c; oz. 10c; ¼ lb. 35c; lb. \$1.00.

Perfecto IMPROVED. Very uniform in size, nearly round, and densely netted. The flesh is a very thick salmon color, shading to green with exceedingly small seed cavity, therefore very desirable for market. It is the most popular variety in the Rocky Ford district. Is second early. Pkt. 5c; oz. 10c; ¼ lb. 35c; lb. \$1.00.

HEARTS OF GOLD. Fruit round, slightly ribbed, fine netted. Average 2 pounds. Deep pink-salmon flesh. One of the best shippers. Pkt. 5c; oz. 10c; ¼ lb. 35c; lb. \$1.00.

Hale's Mildew Resistant, No. 45 The H. B. variety that has proven very resistant to powdery mildew. Holds firm and stands long distance shipping. Pkt. 5c; oz. 15c; ¼ lb. 45c; lb. \$1.25.

POLLOCK'S 10-25 SALMON TINT. "Dependable Grade." This is considered a very satisfactory strain of the Rocky Ford type of Cantaloupe. It produces heavily netted fruits of uniform size. Flesh is green, shading to salmon tint. Very strong rust-resister. Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 90c.

ROCKY FORD. A cantaloupe of great celebrity, grown at Rocky Ford. Small in size but of very superior flavor; flesh green with a line of gold just beneath the skin. Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 80c.

BURRELL'S GEM—Defender. Pink, fine-grained. Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 90c.

TOMATOES *Delicious*

One ounce will produce 1,500 plants; ¼ pound to transplant for one acre.

Tomatoes are planted indoors in a window garden about the first of March. When the third leaf of a plant has formed, put the plant into a 3-inch pot or box. After all danger of frost is over the plants may be set in the ground. Do not plant Tomatoes within 3 feet of any other crop. Dig holes 3 feet apart and deep enough to allow placing the plant an inch or two deeper than it was in the pot. Cover the top of the pot with your fingers, holding the plant between them; then turn the pot upside down, tapping it with a trowel or other tool, when the plant will easily come out. Place it in the ground, pressing the earth around it; if the earth is dry, water it as soon as the plants are set. Some people put a ring of heavy paper around the plant, at the top of the soil, to keep off cutworms. June 1st is the usual time for transplanting in northern latitudes. Tie the growing plants to stakes. We will have plants ready in May and June.

Tomato Seed should be carefully treated with **SEMESAN POWDER** to prevent disease.

WILT-RESISTANT VARIETIES

This class of tomatoes is especially desirable where blight and wilt affects the ordinary varieties. In any event they are good producers of reasonably perfect fruit.

One ounce for 150-ft. row; 2 pounds for one acre.

Plant Turnips between the first day of May and the last of July, in rows a foot apart. A quarter-inch of soil is enough to cover the seed. The plants should be thinned out to about 5 inches apart. Late turnips are generally considered the best. They should be taken out before the first heavy frost, in the fall, and can be packed in boxes of sand to keep all winter.

It is one of the best turnips on the market. Has a bright purple top, white underneath. Leaves are short, narrow and erect. Flesh white, fine-grained and of mild, pleasant flavor. Matures in 8 to 9 weeks. Pkt. 5c; oz. 10c; ¼ lb. 20c; 1 lb. 60c; 5 lbs. \$2.75.

Pkt. 5c; oz. 10c; ¼ lb. 20c; 1 lb. 60c; 5 lbs. \$2.75.

Purple Top White Globe Much larger than the Purple Top Strap Leaf. A little later and a much better producer. Much liked in Denver market. Pkt. 5c; oz. 10c; ¼ lb. 20c; 1 lb. 60c; 5 lbs. \$2.75.

SINGING CANARIES

Our birds are all strong and active. Every singer we sell has been tested and known by us as a singer. We cannot send out on trial or exchange birds. State the amount you wish to pay and leave the selection to us. The value of a bird is not in the plumage. All birds are graded as to singing qualities and range of notes.

Young birds available in August, September and October seldom have developed song, however the longer they are with same surroundings the sooner their song develops. Beginning in November you are better pleased with their song.

Birds **MUST** be shipped Express, thus give your Express Office, if different than your Post Office.

We pack and deliver to express office, Denver. They usually carry safely anywhere in the United States. We supply feed and water cups in each box.

Hartz Mountain Canaries

These are the popular singers and usually are mixed in plumage. Considered the most vigorous

"XX" GRADE. A reasonably good song, though not great variety in notes. \$5.50.

"XXX" GRADE. Extra good in all respects, usually yellow plumage. \$6.00.

Imported Singers

SELECT MALES. "XXX" Grade. German trained. \$7.50.

EXTRA SELECT. These birds are re-selected for tone of song. \$8.00.

Female Birds for Breeding

Blue Plumage Parrakeets. Very attractive color. Per pair, \$4.50.

SAVES TIME - LABOR - MONEY**

It is sanitary. A natural absorbent, taking up 4 to 5 times as much moisture as straw. It reduces fire hazards—is easy to spread and can be left in houses for several months. Prevents spread of disease because it keeps floors dry and clean. Helps keep down the ammonia fumes, also makes a very good fertilizer after being removed from poultry houses or barns.

A bale covers about 300 square feet, spread one inch deep.
